- E. Forecast category

Answer: A,D,E

NO.20 Cloud Kicks (CK) tracks the support level of its customers on the account record page. CK wants to show a text notification on a case record page when the related account is a platinum-level customer.

How could an app builder meet this requirement?

- A. Create a text-only Visualforce page > Clone the case page layout > Drag the Visualforce component into the page, and assign the layout to platinum cases.
- B. Add a rich text area to the Case Lighting page > Set the component visibility of the rich text area to show when the account support level is platinum.

C. Clone the Case Lightning page > Add a rich text area to the new page, and assign this page to platinum accounts.

D. Create a text-only Visualforce page > Drag the Visualforce component into the Case page layout > Set its visibility to show when the account support level is platinum.

Answer: B

NO.21 All contact's mailing post code should match the account shipping postal code. How to do it?

A. Geolocation()

B. Use compare operator

C. Use distance() use distance()

D. Use NOT EQUAL operator

Answer: B

NO.22 What is a true statement in regards to creating custom report types?

A. Any object can be chosen unless the object is not visible to the person creating the report type through security settings

B. When the primary object is a custom object and is deleted, then the report type and any reports created from it must be deleted manually.

C. Once a report type is saved with a standard or custom primary object, the primary object cannot be changed for that report type.

D. The detail object in a master-detail relationship cannot be added as a secondary object on a custom report type

Answer: C

Explanation:

Explanation: You can choose from all objects—even those you don't have permission to view. This lets you build report types for a variety of users. Once you save a report type, you can't change the primary object. If the primary object on a report type is a custom object, and the custom object is deleted, then the report type and any reports created from it are automatically deleted. If you remove an object from a report type, all references to that object and its associated objects are automatically removed from reports and dashboards based on that type.
